

Figure 4.6. A-B: Lateral geochemical trends observed in M-zone with increasing degree of supergene alteration (continue from Fig. 4.5). C-H: Geochemical trends observed for C-Zone with increasing degree of supergene alteration. Reference boreholes selected are Rex 85 (unaltered braunite lutite), Rex 70 (weakly supergene altered braunite lutite), and Rex 2 (strongly supergene altered braunite lutite).
