

Sample no.	Rex 71C2						
	Abundance	Distribution & Remarks	Size (ovals) or thickness (laminae) in mm	Mineralogy	Abundance	Size (mm)	Shape
<b>Matrix</b>	40%	Fine grained and very finely interspersed.		Braunite	x	0.004	Anhedral
				Microspar to pseudospar [Mangano-calcite]	xxxx	0.0075-0.01	Anhedral
				Hematite	x	0.004	Euhedral to subhedral
				Hausmannite	x	0.005	Anhedral
<b>Ovoids</b>	30%	Unevenly; Accretions of ellipsoidal and rounded ovoids of small to medium size in cloud structures give the zone a banded (2-3mm) appearance. Ovoids consist mainly of pseudospar and have mineral inclusions. A few irregular shaped ovoids are also present in the zone.	0.4x0.25 0.35x0.2 0.5x0.28	Braunite	x	0.012	Anhedral
				Pseudospar [Calcite]	xxxx	0.03-0.04	Anhedral
				Hausmannite	xx	0.011	Anhedral to subhedral
<b>Laminae</b>	10%	Unevenly; Finely laminated and consists mainly of pseudospar. Laminae also have mineral inclusions..	0.5	Braunite	x	0.01	Anhedral
				Pseudospar [Calcite]	xxxx	0.03-0.04	Anhedral
				Hematite	x	0.005-0.01	Anhedral
				Hausmannite	xx	0.01	Subhedral
<b>Other</b>		The zone has a banded appearance					
	15%	More porous than in the C1-zone.	0.02				
	5%	Accretions of hausmannite with barite inclusions are also present in the matrix.	0.058	Hausmannite		0.005	Anhedral
				Barite		0.0028	Anhedral

xxxx - Dominant (>50%); xxx - Major (20-50%); xx - Minor (5-20%); x - Trace (<5%)
