

## ACKNOWLEDGEMENTS

During the research of this project, many individuals have assisted with the preparation of the thesis. Sasol Mining and Anglo Coal Geological Services are acknowledged for providing geological data without which this thesis, would not have been possible; Mr. J. Veldsman of Sasol Coal, Consulting Geologist - Coal granted permission for Sasol data to be presented in this thesis. Anglo Coal Geological Services provided access to hundreds of borehole logs that were previously logged over a number of years, and Sasol Mining also allowed access to their borehole logs.

Mr. K. Bell, Senior Vice President of Anglo Coal Operations Limited, gave permission and authorized the use of New Denmark Colliery data.

I am grateful to the New Denmark Colliery management for their co-operation in allowing me access to the colliery property and to access the drilling operations and log and sample core.

The members of Anglo Coal Geological Services who assisted either directly or indirectly with the preparation of this study:

1. For the supervision of my work, assistance with sourcing references and aspects of field work, I would like to thank Malcolm Spurr, Senior Division Geologist and I am very grateful to Ian de Klerk, Data Manager for helping me with data input, as well as to Warren Kill for important advice relating to the study area.
2. I am very grateful to Wilna van Zyl who helped with typing, to Jackie Armstrong who assisted with scanning valuable data, and particularly I am

indebted to Magdelina Smith for her excellent drafting, frequently under extremely difficult circumstances.

3. I am very grateful to Marius Smith for translating the abstract into Afrikaans.

Financial support via a bursary from the Council for Scientific and Industrial Research (CSIR) - (Division of Mining Technology Miningtek) is gratefully appreciated. The present study forms part of the Coaltech 2020 Scientific Program.

I am grateful to Professor Bruce Cairncross my supervisor, for his editorial skills and advice, and to the Rand Afrikaans University, Department of Geology for approving this thesis.

In addition I would like to thank you, my parents Radmila and Vojislav, who gave me a great deal of support throughout this research while visiting me here in South Africa. Finally, to my nieces Katarina and Dragana for love and encouragement, interest and support, while visiting South Africa.
