Abstract	vi
Uittreksel	viii
1.INTRODUCTION	1
1.1.Regional geology of the Limpopo Complex	1
1.2.Geology of the Central Zone	8
1.2.1. Rock types	8
1.2.2. Geochronology	11
1.2.3. The regional structural framework of the Central Zone	14
1.2.4. Published P-T paths for the metamorphic evolution of the CZ	19
A. Isothermal decompression followed by isobaric cooling	20
B. Isothermal decompression	21
C. Decompression cooling	22
D. Counter clockwise P-T path (Holzer et al., 1998)	22
E. Clockwise P-T loop (prograde P-T paths) (Zeh et al., 2004)	23
1.3. Scope and research methods	23
2. GEOLOGY AND STRUCTURE OF THE GA-TSHANZI AND CAMPBELL FOLDS	26
2.1. The geological setting of the study area	26
2.2. The detailed structure of the Ga-Tshanzi fold	29
2.2.1. Planar features developed in different lithologies	30
2.2.2. Linear features developed in the different lithologies	36

2.2.3. The structural geometry of Ga-Tshanzi fold	38
2.3. The detailed structure of the Campbell Fold	40
2.3.1. Domain 1	41
A. Planar features	41
B. Linear features	46
2.3.2. Domain 2 (Fig. 2.1)	49
A. Planar features	49
B. Linear features	51
2.3.3. Discussion of the structural pattern of the Campbell fold	53
2.4. Comparison of data from the Ga-Tshanzi and Campbell folds	54
3. METAMORPHIC PETROLOGY	56
3.1. Outstanding problems related to the metamorphic evolution of the CZ	56
3.2. Purpose of this Study	56
3.3. The Ga-Tshanzi fold	58
3.3.1. Outcrop description	58
3.3.2. Petrography	59
A. The Garnet1 association	60
B. The Garnet2 association	62
C. Comparison of two garnet associations	63
3.3.3. Chemistry	64
A. Bulk Chemical composition	64
B. Chemical composition of minerals of the garnet1 association	64
C. Chemical data for the Garnet2 association	67

D. The chemical compositions of the garnet 1 and 2	74
3.3.4. P-T path for the evolution of the Ga-Tshanzi fold	78
A. Methodology	78
B. The Ga-Tshanzi P-T path	79
3.4. The Campbell fold	85
3.4.1. Outcrop description	85
3.4.2. Petrography	85
3.4.3. Chemical Data	88
A. Bulk Chemical composition	88
B. Chemical composition of minerals	88
C. Discussion	95
3.4.4. A P-T path for the evolution of the Campbell fold	98
3.5. A Comparison of samples TOV13 (Ga-Tshanzi) and 06-19 (Campbell)	101
3.5.1. Outcrop appearance	101
3.5.2. Petrographic differences	102
3.5.3. Chemistry	103
A. Bulk chemistry	103
B. Mineral Chemistry	103
3.5.4. P-T paths	105
4. DISCUSSION	107
4.1. Introduction	107
4.2. The late -Archaean tectono -metamorphic event	107
4.2.1. Significance of the Singelele Gneiss	107
4.2.2. Significance of sheath fold formation in the CZ	108

4.2.3. The high-temperature shear deformational event	108
4.3 Significance of the Paleoproterozoic event	110
4.3.1. A transpressive shear system in the CZ	110
4.3.2. Significance of cross fold formation on the timing of events of the CZ	110
4.4. The significance in the development of the Ga-Tshanzi and Campbell folds in the evolution of the CZ	110
Appendix 1: Bulk chemistry of samples Tov13 and 06-19	113
Appendix 2: Thermobarometric data for sample Tov13	114
Appendix 3: Thermobarometry data for sample 06-19	115
Appendix 4: Microprobe analysis done on sample TOV13	116
Appendix 5: Microprobe analysis for sample 06-19	133
5. References	145
