
Preface

Without the grace and blessings I received daily from my Heavenly Father this work would not have been possible.

I would like to extend my sincerest gratitude to the following persons:

My wife, Gerda, for her consistent encouragement, support and tolerance during my time of study. Thank you for all the sacrifices you had to make through the years to make it possible for me to continue with my studies, even in times when it was not convenient.

My family and family-in-law for their support and encouragement through the years.

My promoter, André Roodt, for his guidance, encouragement and support. Thank you for all the effort that you have made to accommodate me during this study, especially the last two years.

Fanie Muller, for the data collections of most of the crystal structure determinations, even when it was very frustrating and inconvenient.

The personnel and fellow students of the Chemistry Department who contributed to this thesis in any way, for their support and the enjoyable times we shared.

I dedicate this thesis to all that helped to make this work a reality, especially to my wife, Gerda.

Hendrik van der Westhuizen
