

**Human leukocyte antigen (HLA) polymorphisms and the
susceptibility to disease in South African population groups:**

**A case-control study of HLA-DRB polymorphism and
tuberculosis susceptibility in the Cape Coloured population.**

by

Anna E. Brune

DISSERTATION

at the

RAND AFRIKAANS UNIVERSITY

Auckland Park
South Africa

SUPERVISOR: Prof L Bornman

November 2001

“To laugh often and much; to win the respect of intelligent people and the affection of children; to earn the appreciation of honest critics and endure the betrayal of false friends; to appreciate beauty, to find the best in others; to leave the world a little better; whether by a healthy child, a garden patch or a redeemed social condition; to know even one life has breathed easier because you have lived.

This is the meaning of success.”

Ralph Waldo Emerson

**For my brother Helmuth,
who gave me the courage to live life to the fullest.**

	Page no
Preface	i
Acknowledgements	iii
Summary	iv
Samevatting	viii
List of abbreviations	xii
List of Figures	xv
List of Tables	xvi

Chapter 1

Introduction

1.1 Introduction.....	1
1.2 Literature overview.....	3
1.2.1 Tuberculosis	
1.2.1.1 The pathology of TB	
1.2.1.2 Treatment of TB	
1.2.1.3 Factors contributing to development of TB	
1.2.2 Human Leukocyte Antigens (HLA)	
1.2.2.1 HLA genes	
1.2.2.2 HLA molecules	
1.2.3 Disease susceptibility	
1.2.3.1 TB history and ethnic differences	

1.2.3.2 Susceptibility to TB with regard to HLA polymorphisms	
1.2.3.3 Approaches in disease gene identification	
1.2.4 South African Perspective: Cape Coloureds	
1.2.5 Methodology for HLA typing	
1.2.5.1 Serological techniques	
1.2.5.2 Molecular techniques	
1.2.5.3 Comparison of techniques	
1.3 Study Objective.....	36

Chapter 2

HLA-class II and disease susceptibility in South African populations

2.1 Introduction.....	38
2.2 The Human Major Histocompatibility Complex (MHC) or Human Leukocyte Antigen (HLA) Complex.....	39
2.3 Disease susceptibility.....	40
2.4 HLA alleles commonly found in different populations..	42
2.4.1 Non-South African populations	
2.4.2 South African Blacks	
2.4.3 South African Indians	
2.4.5 Coloureds	
2.4.6 Khoi and San	
2.5 HLA diversity of South African population groups and disease susceptibility.....	44

2.5.1 Insulin-dependent diabetes mellitus (IDDM)	
2.5.2 Rheumatoid Arthritis	
2.5.3 Other diseases	
2.5.3.1 Juvenile Chronic Arthritis (JCA)	
2.5.3.2 Chronic Rheumatic heart disease (CHRD)	
2.5.3.3 Grave's disease	
2.5.3.4 Human T-cell Leukemia Virus-1 associated myelopathy (HAM/TSP)	
2.5.3.5 Idiopathic cardiomyopathy (IDC)	
2.5.3.6 Systemic lupus erythematosus (SLE)	
2.5.3.7 Nephrotic syndrome	
2.5.3.8 Multiple Sclerosis (MS)	
2.5.3.9 Familial hypercholesterolaemia	
2.5.3.10 Hepatocellular carcinoma	

2.6 Conclusion.....	59
---------------------	-----------

Chapter 3

HLA-DRB polymorphism and genetic susceptibility to TB in the Cape

Coloured population in South Africa

3.1 Introduction.....	61
3.2 Materials and Methods.....	65
3.2.1 Preliminary studies	
3.2.2 Subjects	
3.2.3 DNA extraction	

3.2.4 Polymerase Chain Reaction	
3.2.5 Agarose Gel Electrophoresis	
3.2.6 Statistical Analysis	
3.3 Results.....	74
3.3.1 Association study (alleles and genotype)	
3.3.2 Relative Risk	
3.3.3 Logistical Regression	
3.4 Discussion.....	80

Chapter 4

<u>Conclusion</u>	88
<u>References</u>	92
<u>Addendum</u>	122
