ACKNOWLEDGEMENTS

The author would like to acknowledge and express his sincere gratitude to the following people and organisations:

- Dr GM Pieterse, my supervisor, for her professional guidance, assistance and sincere interest and commitment to her students. Also, for providing me with various opportunities to gain valuable research experience throughout my studies – thank you
- Prof JHJ van Vuren, my co-supervisor, for his professional guidance
- University of Johannesburg, for the financial support
- National Research Fund (NRF), for the financial support
- Department of Zoology, University of Johannesburg, for the use of the aquatic research and laboratory facilities
- Dr IEJ Barnhoorn,* a friend and colleague, for her advice, assistance with the tissue sampling, and the EDC analyses of the water samples
- Prof MS Bornman,* for the EDC analyses of the water samples
- Mr S Tshabalala, for his assistance in the aquarium regarding the breeding of the fish specimens
- Mr M Mathonsi, for his assistance in the aquarium
- Dr A Nel, for her guidance regarding aspects of the water quality analyses and the preparation of the breeding medium
- Miss MJ Marchand and Miss C Ackermann, my lab colleagues and friends, for their assistance with the quantitative histological assessment
- My parents, Joe and Tina for their unconditional support and encouragement throughout my studies!

*Department of Urology, University of Pretoria
