

CONTENTS

1. INTRODUCTION	1
1.1 Problem Statement	2
1.2 How this dissertation is organised	5
2. INFORMATION SECURITY	6
2.1 What is information security?	7
2.2 The five ISO Information Security Services	9
2.2.1 Identification and Authentication	9
2.2.1.1 <i>Authentication Mechanisms</i>	11
(a) <i>Something the entity knows</i>	11
(b) <i>Something the entity possesses</i>	12
(c) <i>Some unique attribute of the entity</i>	13
2.2.2 Authorisation	14
2.2.2.1 <i>Authorisation Information</i>	15
2.2.2.2 <i>Authorisation Policies</i>	15
2.2.2.3 <i>Authorisation Mechanisms</i>	16
2.2.3 Confidentiality	18
2.2.3.1 <i>Symmetric encryption</i>	19
2.2.3.2 <i>Asymmetric encryption</i>	20
2.2.4 Integrity	22
2.2.4.1 <i>Authenticator algorithms</i>	23
2.2.5 Non-repudiation	24
2.3 The IS service of availability	26
2.4 Conclusion	27
3. DATABASE SYSTEMS	29
3.1 File systems	30
3.1.1 Manual file systems	30
3.1.2 Computer-based file systems	30
3.1.3 Shortcomings of the file system	32
3.2 Databases	33
3.2.1 Advantages of a DBMS	34

3.2.2 Database Models	35
3.2.2.1 <i>The Hierarchical Database Model</i>	36
3.2.2.2 <i>The Network Database Model</i>	38
3.2.2.3 <i>The Relational Database Model</i>	40
(a) <i>The Entity Relationship Model</i>	43
(b) <i>Structured Query Language (SQL)</i>	44
3.2.2.4 <i>Object-Oriented Databases</i>	45
3.2.2.5 <i>Multimedia Databases</i>	47
(a) <i>Terminology and multimedia database design issues</i>	47
(b) <i>The pro's and con's of a multimedia DBMS</i>	51
3.3 Conclusion	51

4. MULTIMEDIA CONCEPTS	53
4.1 Introduction	54
4.2 Concepts regarding images	55
4.2.1 Images and colour models	55
4.2.2 Regions	55
4.3 Concepts regarding video	57
4.3.1 Animation and frame rate	57
4.3.2 Simulation, scripts, and tweening	57
4.3.3 Computer vision	58
4.4 Concepts regarding audio	60
4.4.1 Audio basics	60
4.4.2 Audio effects	61
4.5 Conclusion	62

5. MULTIMEDIA SECURITY	63
5.1 Securing multimedia using traditional techniques	64
5.2 Watermarks	64
5.2.1 The definition of a watermark	65
5.2.2 Watermark requirements	65
5.2.3 Perceptually based watermarks	66
5.3 Other multimedia security research	68
5.4 Conclusion	72

6. SECURE IMAGE DATABASES	73
6.1 Introduction	74
6.2 The secure image database model	75
6.2.1 Phase one: The Input Phase	77
6.2.2 Phase two: The Storage Phase	80
6.2.3 Phase three: The Output Phase	81
6.3 A prototype for the secure image database model	83
6.3.1 Implementation issues	84
6.3.2 Problems and improvements	89
6.4 A variation of the secure image database model	91
6.5 Conclusion	93

7. SUSPICION AND OTHER ISSUES CONCERNING THE SECURE IMAGE DATABASE MODEL	94
7.1 Suspicion	95
7.1.1 Factors that raise the level of suspicion	96
7.1.2 Lowering the level of suspicion with background images	97
7.1.3 Other methods of lowering the level of suspicion	99
7.2 Region selection improvements	101
7.3 Security issues	103
7.3.1 Security requirements for phase 1	103
7.3.2 Security requirements for phase 2	104
7.3.3 Security requirements for phase 3	104
7.3.4 Security requirements in general	105
7.4 Conclusion	106

8. SECURE VIDEO DATABASES	107
8.1 Introduction	108
8.2 The secure video database models	108
8.2.1 The basic frame editing model	109
8.2.2 The manual approach	112
8.2.3 The script approach	119
8.2.4 The robot vision approach	121
8.3 Adding frames or worldly objects to video files	125
8.4 Suspicion	126

8.5 Security issues	127
8.6 Conclusion	128
9. SECURE AUDIO DATABASES	129
9.1 Introduction	130
9.2 The secure audio database models	130
9.2.1 The basic audio editing model	131
9.2.2 The frequency/amplitude editing model	133
9.2.3 The audio-effect editing model	134
9.3 Adding/mixing audio clips with original files	136
9.4 Suspicion	136
9.5 Security	137
9.6 Conclusion	138
10. CONCLUSION	139
