

## FIGURES AND TABLES

Fig. 2.1: ISO 7498/2 Information Security Architecture	8
Table 2.1: ACM example	17
Fig. 2.2: The traditional symmetric encryption process	19
Fig. 2.3: The key-based symmetric encryption process	20
Fig. 2.4: The public key encryption process (to ensure confidentiality)	21
Fig. 2.5: The public key encryption process (to ensure non-repudiation)	25
Table 3.1: Patient file example	31
Fig. 3.1: DBMS environment	34
Fig. 3.2: A hierarchical structure	36
Fig. 3.3: An example of a network database model	39
Table 3.2: 'Bookings' example of relational tables	41
Fig. 3.4: ER diagram for the Bookings example	44
Fig. 4.1: Overlapping regions	56
Fig. 4.2: Analogue vs. Digital signal	61
Fig. 5.1: The watermarking process	65
Fig. 6.1: The secure image database model	76
Fig. 6.2: The box method problem	78
Fig. 6.3: A screenshot of the database interface component	86
Fig. 6.4: ER diagram for the secure image database prototype	87
Fig. 6.5: A screenshot of the SMI component	88
Fig. 6.6: Variation of the secure image database model (phase 1 and 2)	91
Fig. 7.1: Basic illustration of suspicion	95
Fig. 7.2: Overlapping image object problem (original and background images)	98
Fig. 7.3: Overlapping image object problem (assembled image)	99
Fig. 8.1: The basic frame editing model	109
Fig. 8.2: The manual approach	113
Fig. 8.3: The script approach	119
Fig. 8.4: The robot vision approach	122

Fig. 9.1: The model structure for all three secure audio database models	131
Fig. A.1: Bad selection using the box method	149
Fig. A.2: Bad selection using the polygon method	149
Fig. A.3: Bad selection using the automated method	150
Fig. A.4: Effect of shadows	150
Fig. A.5: Importance of texture	151
